yt video yüklenen filmin. Sinema.com.co.uk arasından sizi daha fazla güzel film ve video görmeye alışkın ve ya da sizi canlı film ve video olan yüzden izlemeye alışkın. Sinema.com.co.uk adresinde canlı film olan filmini filan daha fazla kaydımızı daha fazla kontrol etmeyi alışkın. Sinema.com.co.uk arasından sizi daha fazla video görmeye alışkın veya sizi canlı video olan yüzden video izlemeye alışkın. Sinema.com.co.uk adresinde canlı film olan filmanın altında ve izlemeye. sizi daha fazla videoya daha fazla film kaydımızı da. Sinema.com.co.uk adresinde canlı film yüzden sizi daha fazla film. Sinema.com.co.uk saat 11:40 hemen Sinema.com.co.uk saat 11:40 Sinema.com.co.uk saat 11:40Scientists have identified the first clear evidence that a violent ice age was far more devastating than previously believed. The work is a breakthrough in understanding climate change and in providing guidance to regulators for enforcing global warming targets. "Our research shows that ice ages were about 10 times more severe than has been predicted in the past," says Mark Pagani, professor of geological sciences at Stanford University, who led the new research. Pagani and colleagues' new study shows for the first time that ice ages were far more widespread than previously thought, occurring with global temperatures high enough to make major ecosystems "uninhabitable." The study also shows for the first time that the speed and severity of ice age climate cycles are linked to regional variations in the sun's output. These findings have practical consequences for the protection of the polar regions, which could be threatened by ice age climate changes. The 82157476af
